Refer to the Focus Question on page 2 of this title to guide discussion and support additional learning connected to the text.

Most of Earth's surface is covered with water. Plants, animals, and humans are dependent upon water for their survival. **Earth's Water** introduces students to the many forms of Earth's water and emphasizes the importance of caring for this valuable resource.

Earth's Water

Written by Katherine Scraper

Earth's Water

Written by Katherine Scrapper

Focus Question
Why is water important?

Words to Know

evaporation	liquid
gas	polluted
invisible	solid

Connections

Writing

Write a speech telling your classmates why it is important to take care of Earth's water. Use the information from the book to help you. Present your speech to your class.

Science and Art

Draw and label a picture showing water in its three different states: liquid, solid, and gas. Include some vocabulary words from the book in your picture.

Table of Contents

Water Everywhere	4
Different Forms of Water	7
Changing Water	11
Water Is Important	14
Glossary	16

Water Everywhere

Water is in ponds, lakes, and oceans.
It flows in rivers and streams.
It is in the air and frozen as snow
and ice.

The dark parts in this picture of Earth are water.

Most of Earth is covered with water.
Plants and animals need water
to live.

What are some ways you use
Earth's water?

Each of these containers holds four cups of water.

Different Forms of Water

Most of the water we see is a **liquid**.
Liquid water takes the shape of the container it is in.

Ice can be carved into many shapes.

Not all water is liquid.
When water gets very cold, it freezes.
It becomes **solid**.
Solid water is called ice.

Sheets of ice cover Earth's South Pole.

Much of Earth's frozen water is at the North and South Poles.

What forms of water can you see in this picture?

Some of Earth's water is **invisible**.
It is in the air.
This water is a **gas**.

The sunlight heats up the snow, and the snowman melts.

Changing Water

Water is always changing.

When frozen water is heated, it melts.

It changes to a liquid.

When liquid water gets cold, it freezes.

It changes to ice.

Energy from the Sun causes the water to evaporate.

Have you ever seen a puddle of water dry up on a hot day?

Energy from the Sun changed the liquid water into a gas.

This is called **evaporation**.

Clouds drop water on the desert as rain.

When invisible water in the air gets cold, it can make clouds. Clouds are tiny drops of liquid water. Those drops can get bigger. Then they fall as rain.

Water Is Important

Rain keeps plants alive.
We fight fires with water.
Animals take baths in water.

It is important to take care
of Earth's water.

Polluted water makes people, plants,
and animals sick.

Would you want to drink and
play in polluted water?

Glossary

evaporation (*n.*) page 12

the change of water from a liquid to
a gas as a result of getting warmer

gas (*n.*) page 10

matter that can freely change shape
and size; often it can't be seen

invisible (*adj.*) page 10

unable to be seen

liquid (*n.*) page 7

matter that is able to flow and
change shape while keeping its size

polluted (*adj.*) page 15

made dirty or harmful

solid (*adj.*) page 8

having a firm or hard form or shape
